Professional Summary

Java Full Stack Developer with 3+ years of experience developing scalable, cloud-native microservices for enterprise platforms. Expert in Java, Spring Boot, AWS and React with a proven track record of engineering fault-tolerant, high-throughput payment systems from the ground up. Adept at leveraging advanced messaging (Kafka), caching (Redis), and AI-augmented observability (Spring AI) alongside robust JWT-based security to optimize performance, reliability and cloud deployments.

Experience

LTIMindtree (L&T Group) — *JULY 2022 - CURRENT*

Consultant – Software Engineer (Java/ Spring Boot) — ***India***

Projects

INTELLIGENT PAYMENT INTEGRATION PLATFORM FOR INSURANCE SYSTEMS

Java, Spring Boot, Spring JDBC, REST Client, AWS, Kafka, Redis, Stripe API, React, SQL

- Engineered a microservices-based payment platform covering **Validation**, **Core Payment Processing, Status management** and built **seamless Stripe integration** with PSP API integration for session creation, **retrieval**, **expiration** using **Java and Spring Boot,** utilizing **Spring REST Client** for seamless communication with the Stripe API and **Spring Cloud features** for inter-service communication to manage core processing and the complete session lifecycle**.**
- Structured core business logic using a Factory Design Pattern to dynamically route and process 5 distinct payment statuses before persisting data via **Spring JDBC** and optimized **SQL** queries for high-performance idempotent transaction logging to **Oracle Databases** with integrated **Redis caching** to accelerate payment session retrieval.
- Implemented **Kafka**-powered **asynchronous** messaging to decouple components for real-time status notifications, backed by a database-driven **reconciliation process** to automatically detect and **retry** failed message deliveries.
- Developed **AI-augmented** Global Exception Handling frameworks using Controller-Advice and **Spring AI**, integrating **OpenAI LLMs** using **OpenAI API** for automated triage, context-aware root cause analysis, and **intelligent,** easily human readable **error-response generation**.
- Applied **Resilience4j** circuit breakers to prevent cascading system failures, **triggering fallback methods** to queue pending transactions and maintain stability during external **Stripe API** outages and implemented **Spring Security** for **stateless JWT validation** at the validation service layer,
- Deployed the highly available payment infrastructure on **AWS** using **Amazon EKS** for scalable **container** orchestration, integrating **API Gateway** for secure routing, **Amazon RDS** for persistent data storage, **S3** for centralized log archiving, and **Secrets Manager** for credential management.
- Developed an enterprise-grade **React** Single Page Application (SPA) utilizing centralized state management, implementing optimized API polling for real-time payment status updates, and securely managing **JWT-based** authentication flows for session lifecycle management.

Technical Skills (Tools & Technologies)

Programming: Java, Java 8, Java 17, Collections, Multithreading, Exception Handling

Frameworks & Libraries: Spring Boot, Spring Security, Hibernate, Spring Data JPA, Spring JDBC, RestClient, Spring Profiles.

Microservices: Spring Cloud (Feign Client, Config Server, API Gateway, Service Discovery), Docker, Kubernetes.

Cloud: AWS (EC2, RDS, S3, ECS, EKS, AWS Secrets Manager).

Message Broker: Kafka

Front-end Technologies: HTML, CSS, React

Databases: OracleSQL**,** MySQL, PostgreSQL

Caching & Logging & Circuit Breaking: Redis, SLF4J, Resilience4j

AI-Paired Programming: GitHub Copilot

Build & Version Control: Git, GitHub, Bitbucket, Maven, SourceTree

Methodologies: Agile, OOPs, Rest APIs

Testing: JUnit, Mockito, Postman

Design Patterns: Factory, Builder, SAGA

IDE & Tools: Eclipse, STS, VS Code, Jira

Additional Highlights :

- **Strong problem-solving skills**, **continuous learner**, and **collaborative team player** with experience delivering projects in Agile environments.
- Proficient in **Git branching strategies** (**Feature, Integration, Release, Hotfix, Bugfix**) for efficient source code management.
- Skilled in **Jira** for sprint management, task tracking, and issue management in Agile projects.

EDUCATION

NETAJI SUBHASH ENGINEERING COLLEGE (TECHNO INDIA) — Jun 2018 – Jun 2022

Bachelor of Technology (B. Tech) — *CGPA: 8.56/10.0*
